

Roundtable Commander

A platform-independent command line client for Roundtable TSMS

Let Roundtable TSMS expertly manage your OpenEdge application development. Let Roundtable Commander handle the rest.

>_ LOCAL ACCESS TO THE ROUNDTABLE REPOSITORY

A simple command line interface, Roundtable Commander offers a fast and convenient alternative to logging into Roundtable TSMS. Designed for basic grab-and-go efforts, Roundtable Commander delivers precisely what an experienced developer needs to a local machine to answer an on-the-spot inquiry, solve a heady problem, or complete a one-off task without having to be connected with the central repository.

>_ A DIRECT PATH TO JENKINS AUTOMATION

With the Roundtable Commander API, you can establish a path of communication between the Roundtable repository and Jenkins. Once set, choose Roundtable Commander as your SCM plugin and start building Continuous Integration/Continuous Delivery (CI/CD) pipelines in Jenkins for applications that you manage in Roundtable TSMS.

>_ EASY TO INSTALL, NO ADDITIONAL COMPONENTS

Roundtable Commander can be downloaded onto any operating system that supports Java. Once installed, you simply connect Roundtable Commander to your existing Roundtable TSMS server. No additional components are required.

Benefits

Roundtable Commander provides a command line client *and* SCM plug-in for Jenkins so you can expand your OpenEdge development projects beyond SCM to CI/CD and more.

- > Easy to install
- > Provides command line access to Roundtable TSMS repositories
- > Delivers a local working copy of the codebase with as much or as little revision history as desired
- > Enables Roundtable TSMS as an SCM option in Jenkins
- > Creates a clear path to build a CI/CD strategy for your OpenEdge applications managed in Roundtable TSMS

Features

- ☑ A platform-independent **command line client** for Roundtable TSMS
- ☑ Ability to have a **local working copy** of your codebase with **full change history** for specific tasks or as remote backup
- ☑ Ability to integrate **multiple Roundtable TSMS repositories**
- ☑ Option to download **multiple Roundtable TSMS workspaces**
- ☑ Option to **exclude/limit revision history** or **select a specific release** from Roundtable TSMS for your local copy
- ☑ **Show differences** between workspaces and releases in Roundtable TSMS, even if from different repositories
- ☑ Both **remote Roundtable TSMS** and **local repository APIs** available for integration in Java environment
- ☑ A **SCM plugin for Jenkins** with the Roundtable Commander API

SYSTEM REQUIREMENTS

Roundtable Commander is a Java application that requires a Java runtime environment in version 11 or higher. No Java Development Kit (JDK) is required.

ROUNDTABLE TSMS COMPATIBILITY

Roundtable Commander connects to your existing Roundtable TSMS server in version 12.4 or higher.

REPUTATION

As a Progress Technology Alliance Partner and recognized leader in its industry for over 25 years, Roundtable Software is committed to ensuring that its customers can leverage the best of what the Progress OpenEdge platform has to offer.

There is no need to adopt and manage other technologies to achieve your software configuration management solution goals. Our solution is integrated into the Progress OpenEdge platform — delivering proven performance, security, and scalability for your software applications with technology you trust.

Dedicated to delivering the best experience to our customers, Roundtable Software strategically seeks partnerships that can help improve our products, extend the functionality of our products, and better serve the needs of our customers.

Roundtable Commander is developed and offered by Acorn IT in partnership with Roundtable Software. For more information about this complimentary solution for Roundtable TSMS, visit the Acorn IT Roundtable Commander product page at acorn.ro.
